

AI LEGAL™

Client Connect & Consultations System

Client Consultation Lifecycle • Live Chat • Fee Structure • Razorpay Payment Gateway • Case Onboarding

Document Area	Details
Product	AI LEGAL™ Client Connect & Consultations
Primary Advocate Console	AdvocateConsultationsPage.jsx
Core Scope	Consultation booking, communication, payments, scheduling and case conversion
Financial Architecture	30% platform fee / 70% advocate payout with per-minute extension billing

AI LEGAL — Client Connect & Consultations System

Client Consultation Lifecycle, Live Chat, Fee Structure, Razorpay Payment Gateway & Case Onboarding

1. Executive Summary & Core Objective

For practicing advocates and legal consultants, managing prospective client inquiries, scheduling paid legal consultations, collecting fees, and tracking follow-ups is often fragmented across phone calls, unorganized WhatsApp chats, and manual UPI transfers. This lack of structure leads to unpaid advisory time, scheduling overlaps, and lost client retention.

The \\AI LEGAL Client Connect & Consultations System\\ (/dashboard/consultations\\ / AdvocateConsultationsPage.jsx) provides an all-in-one client engagement portal:

1. \\End-to-End Consultation Lifecycle:\\ Complete status progression from incoming consultation request (\\Pending) to active consultation (\\Active), scheduled meeting (\\Scheduled), and successful resolution (\\Completed).
2. \\Multi-Channel Secure Client Communication:\\ Encrypted in-app messaging, scheduled voice consultations, and video conferences.
3. \\Structured Fee & Payout Architecture:\\ Fixed upfront consultation fees, automated per-minute extension billing, and transparent fee splits (70% Advocate Payout / 30% Platform Fee).
4. \\Integrated Razorpay Payment Gateway:\\ Secure payment links, automated invoice generation, webhook verification, and escrow settlement upon consultation completion.
5. \\One-Click Case Docket Conversion:\\ Instantly convert a resolved legal consultation into an active litigation Case Project without re-entering client facts.

2. Technical Architecture & Lifecycle State Machine

\\mermaid

stateDiagram-v2

[\\] --> Pending: Client books consultation & completes payment

Pending --> Active: Advocate accepts consultation request

Pending --> Cancelled: Advocate declines or Client cancels (Refund issued)

Active --> Scheduled: Meeting date & time slot confirmed

Scheduled --> Active: Consultation session starts (Chat / Video / Audio)

Active --> Completed: Consultation concludes & advice delivered

Active --> Expired: Session time limit reached without extension

Completed --> CaseCreated: Advocate clicks "Convert to Active Case Project"

CaseCreated --> [\\]

3. Consultation Lifecycle & Tab Filter States

The advocate's consultation console organizes inquiries into 7 distinct statuses:

```
\\javascript
```

```
// AdvocateConsultationsPage.jsx (Line 13)
```

```
const FILTERTABS = ['All', 'Pending', 'Active', 'Scheduled', 'Completed', 'Cancelled', 'Expired'];
```

```
\\
```

```
\\ | Status Tab | Definition | Required Advocate Action |
```

```
\\|:---|:---|:---|
```

```
\\| \\Pending\\ | A prospective client has submitted an inquiry, described their legal dispute, and paid the consultation fee. | Advocate reviews the summary and chooses to \\Accept\\ or \\Decline\\.
```

```
\\| \\Active\\ | In-app messaging is active. Advocate and client can exchange documents, ask preliminary questions, and formulate advice. | Provide written legal opinion or initiate live call.
```

```
\\| \\Scheduled\\ | A dedicated consultation window (Date & Time Slot) has been locked in the calendar for audio/video call. | Join the virtual consultation room at the appointed time.
```

```
\\| \\Completed\\ | Legal advisory has concluded. Consultation report and advice summary delivered to client. | Retain records or convert matter into a formal court case.
```

```
\\| \\Cancelled\\ | Consultation cancelled before commencement by either party. | Automated Razorpay refund processed to the client.
```

```
\\| \\Expired\\ | Scheduled window elapsed without client attendance or session reached maximum inactivity limit. | Retain documentation; no further messaging permitted.
```

4. Multi-Channel Client Consultation Modes

Advocates can configure and offer three distinct consultation modes:

```
\\mermaid
```

```
graph TD
```

```
Client[Client Booking Form] --> ModeSelect{Select Consultation Mode}
```

```
ModeSelect -- Chat --> ChatRoom[In-App Real-Time Encrypted Chat]
```

```
ModeSelect -- Audio Call --> AudioBridge[Voice Consultation Bridge]
```

```
ModeSelect -- Video Conference --> VideoRoom[HD Video Consultation Room]
```

```
ChatRoom --> Attachments[Legal Document & FIR Uploads]
```

```
AudioBridge --> Recording[Session Audio Notes & Summary]
```

```
VideoRoom --> ScreenShare[Document Review & Screen Sharing]
```

```
\\
```

1. In-App Live Encrypted Chat (\chat)

- Designed for rapid document review and initial legal opinions.
- Supports sharing PDF petitions, FIR copies, property deeds, and contracts.
- Instant delivery with read receipts and active status indicators.

2. Audio Voice Consultation (\audio)

- Telephonic or WebRTC-based audio consultation.
- Ideal for quick advisory calls without requiring client camera setup.

3. HD Video Conference (\video)

- Secure WebRTC peer-to-peer video conference room.
- Includes interactive screen sharing so the advocate can walk the client through contract clauses, court order sheets, or evidence exhibits.

5. Consultation Pricing, Financial Architecture & Payout Split

The system ensures fair commercial compensation for advocates while maintaining platform sustainability:

5.1 Pricing Calculations Engine

In \AdvocateRegistrationModal.jsx\ (Lines 68-75):

```
\\javascript
// Dynamic 30% Platform Fee & Per-Minute Extension Calculations
const rawFee = Math.max(0, parseInt(consultationFee, 10) || 0);
const platformCut = Math.round(rawFee \ 0.30);      // 30% Platform operational cut
const advocatePayout = rawFee - platformCut;      // 70% Net payout to Advocate
const perMinuteRate = rawFee > 0 ? Math.max(1, Math.round(rawFee / 15)) : 0;
const advocatePerMinutePayout = Math.round(perMinuteRate \ 0.70);
const platformPerMinuteCut = perMinuteRate - advocatePerMinutePayout;
\\
```

5.2 Financial Example: ₹1,500 Consultation

- \Base Consultation Fee:\ ₹1,500 for a standard 30-minute consultation.
- \Platform Infrastructure Cut (30%):\ ₹450 (covers payment gateway fees, video hosting, AI summaries, and directory marketing).
- \Net Advocate Payout (70%):\ ₹1,050 credited to the advocate's registered bank account.
- \Per-Minute Overtime Extension:\ ₹100/minute (Advocate receives ₹70/min, Platform receives ₹30/min).

6. Razorpay Payment Gateway & Escrow Settlement

To protect both clients and advocates, all consultation bookings are processed through an automated Razorpay integration:

\\mermaid

sequenceDiagram

participant Client as Client User

participant Webapp as AI LEGAL Webapp

participant Backend as Backend (consultationRoutes.js)

participant Razorpay as Razorpay Payment Gateway

participant Escrow as Platform Settlement Escrow

participant Advocate as Advocate Bank Account

Client->>Webapp: Selects Advocate, Date, Time & clicks "Book Consultation"

Webapp->>Backend: POST /api/consultations/create-order

Backend->>Razorpay: razorpay.orders.create({ amount, currency: "INR" })

Razorpay-->>Backend: Returns orderid

Backend-->>Webapp: Returns Razorpay Order ID & Public Key

Webapp->>Razorpay: Opens Razorpay Checkout Modal (UPI, Cards, NetBanking)

Client->>Razorpay: Authorizes Payment

Razorpay-->>Webapp: Returns razorpaypaymentid & signature

Webapp->>Backend: POST /api/consultations/verify-payment

Backend->>Backend: Verifies HMAC SHA256 cryptographic signature

Backend->>Escrow: Holds funds in escrow; updates status to 'Pending'

Backend-->>Advocate: Push Notification: "New Paid Consultation Request!"

Note over Client,Advocate: Consultation conducted successfully

Advocate->>Backend: Marks Consultation as 'Completed'

Backend->>Escrow: Releases 70% Net Payout to Advocate Bank via Payout API

\\

7. One-Click Conversion to Active Litigation Case Project

One of the most powerful workflows in AI LEGAL is the transition from initial consultation to formal litigation representation:

\\javascript

// Converting Consultation to Active Case Docket

```
const handleConvertToCase = async (consultationId) => {
  const tid = toast.loading('Initializing Case Docket from Consultation...');
  const res = await apiService.request(`/consultations/${consultationId}/convert-to-case`, {
    method: 'POST'
  });
  if (res?.data?.success) {
    toast.success('Successfully converted to active Case Project!', { id: tid });
    navigate(`/dashboard/cases/${res.data.projectId}`);
  }
};
```

\\

Auto-Carried Data Assets:

- \\Client Metadata:\\ Client's full name, phone number, email, and billing address.
- \\Legal Issue Brief:\\ Client's initial dispute summary automatically becomes the preliminary case background.
- \\Uploaded Exhibits:\\ All contracts, FIR copies, or notices shared during the consultation chat are transferred directly into the case's \\Evidence Manager\\ and \\Document Repository\\.
- \\Consultation Transcript:\\ An AI-generated summary of the advice delivered is saved as the first milestone in the case timeline.

8. Backend API Reference for Consultations

\\ Endpoint | Method | Role | Description |

\\:---:---:---:---|

\\ /api/consultations/advocate/conversations\\ | \\GET\\ | Advocate | Fetches all consultation threads filtered by status (\\Pending\\, \\Active\\, etc.). |

\\ /api/consultations/:id/messages\\ | \\GET\\ | Both | Returns full chat transcript and consultation metadata. |

\\ /api/consultations/:id/messages\\ | \\POST\\ | Both | Sends an encrypted text message or file attachment within the consultation. |

\\ /api/consultations/:id/status\\ | \\PATCH\\ | Advocate | Updates session state (\\Active\\, \\Scheduled\\, \\Completed\\, \\Cancelled\\). |

\\ /api/consultations/create-order\\ | \\POST\\ | Client | Generates a Razorpay Order ID for upfront consultation booking. |

\\ /api/consultations/verify-payment\\ | \\POST\\ | Client | Verifies cryptographic payment signature and initiates the consultation thread. |

\\ /api/consultations/:id/convert-to-case\\ | \\POST\\ | Advocate | Converts a resolved consultation into an active litigation Case Project. |
